★Please take them out to the collection point by 8 am.

Q&A

Q1 Why will these items be collected at the collection point instead of at the container?

There are about 19,600 collection points in the city, whereas only about 3,600 collection containers. This causes various problems and inconvenience. The collection method will be changed for solving the problems, residents' convenience and promoting the recycling of waste.

Q2 I'm afraid the waste volume of each collection point will increase.

It is true that the items collected at each collection point will increase, but the amount of waste is expected to be about one fifth of that at each collection container.

Q3 I'm afraid using plastic bags instead of containers will be against reducing waste.

Those plastic bags will be recycled. There is a way to rent containers and nets (rental system) when they can be supervised at apartment buildings and condominiums. For more information, please contact the Waste Collection Center.
